

Dear Mayo residents,

Your municipal council has decided to reduce the number of collections of residual materials and recycling for the year 2023. In order to take a first step in connection with the environment and reducing greenhouse gas emissions, council has decided to proceed with garbage collection one week and recycling collection the following week. This will help reduce the number of times the truck has to drive around the municipality, often at half capacity. We will therefore go from 66 pick-ups to 52 pick-ups, which represents a saving of nearly \$15,000.

What council also wishes is that people no longer put compostable materials in their waste bins. We had a generous grant to buy composters for all our citizens for the purpose of removing organic matter from waste so it can be composted. The more we succeed in reducing our total mass of residual materials **AND** in increasing our recycling mass, the **BIGGER** will be our grant from RECYC-QUÉBEC (which unfortunately has not increased over the last few years).

If you need information on how to make good compost and prevent organic matter from attracting small (and large) rodents, you can consult the information to this effect on the website (<https://mayo.ca/wp-content/uploads/2022/08/Avis-composteurs-arrive-anglais.pdf>)

See the 2023 calendar

In the spirit of collaboration,

Your municipal council
